

COLD SHOT POWER BOOST

Striker™

The All New Water/Methanol Injection System
From The Leader In Performance Electrical

Striker ColdShot System™

The highest quality, most complete water/methanol injection system on the market. The on-board control monitor features an LED gauge displaying boost pressure from 0 to 99 psi and a 60 LED gauge showing the user selected injection curve. The controller features an adjustable injection curve display, a water level warning indicator and a dimming function for night and day brightness.

ColdShot improves performance and horsepower in diesel engines by cooling the intake charge and reducing exhaust gas temperatures. The methanol improves combustion and acts like a high octane fuel. The combination creates more power by allowing for more boost without the power robbing affects of high combustion temperatures. In gasoline engines, ColdShot will allow for more precise timing, cooler combustion and reduced detonation.

#65000 Striker ColdShot System for Gasoline
#65001 Striker ColdShot System for Diesel

Exclusive ColdShot Features:

- Safely adds 70 - 100 horsepower
- User programmable injection curves
- Set it and forget it
- Adjustable on the fly
- Monitors MAP sensor signal
- Cooler intake and exhaust temperatures
- Nickel-plated brass push-to-connect fittings
- Very Fine Mist (VFM) custom made industrial grade nozzle for superior atomization
- High pressure pump
- Industrial quality 12 volt solenoid offers dramatically improved spray control over standard check valve
- 2 quart tank with level sensor and fittings
- Custom wiring harness with all connectors

Lifetime Warranty!

#65010 ColdShot Universal Window Mount Kit
Includes suction cup arm and adjustable holder
Check our website for cup-holder mounts, a/c vent mounts and dash mounts.
