NEW FAST™ DUAL-SYNC DISTRIBUTORS DELIVER PRECISE, RELIABLE TIMING SOLUTION

Seven different FAST™ Dual-Sync Distributors available for popular engine applications utilizing XFI™ Fuel Injection. By offering easy, drop-in installation and precise timing, the new FAST™ Dual-Sync Distributors are the most "user friendly" distributors you can buy for high performance street engines utilizing the FAST XFI™ Fuel Injection System. Equipped with dual, discreet signal pickups, they provide fully sequential EFI operation and the billet 6061-T6 CNC-machined housing ensures long life. Fully tested and specially engineered to work in conjunction with XFI™, these distributors offer the ultimate in timing performance for your engine. *FAST is a division of Competition Cams.*

MAGNAFLOW CAT-BACK EXHAUST FOR THE '06-'07 HONDA CIVIC COUPE

MagnaFlow engineers have developed a complete stainless steel cat-back exhaust system for the '06-'07 1.8L Honda Civic DX/LX/EX Coupe. MagnaFlow's straight through muffler design coupled with mandrel-bent tubing reduces back pressure, allowing for a performance gain that carries across the entire power band. This stainless steel bolt-on cat-back begins with 2.25" mandrel-bent tubing, flowing first through a 6" round polished muffler to reduce cabin noise, then at the rear of the vehicle flows through a 5" round polished muffler with a polished double wall angle cut 4" tip. MagnaFlow designed this system for a smooth, deep tone with little to no resonance for driver comfort, but with a defiant roar on throttle.

FIDANZA INTRODUCES TWIN DISC CLUTCH KIT

Our new twin disc clutch kits are designed to hold up to 800 HP. This is achieved by using state of the art materials and incredible designs. All this holding power does not mean that driveability is lost. Pedal feel is virtually unchanged and engagement is as smooth as our 3.2 kevlar single disc unit. The floater plate on all our units is strapped to eliminate the annoying rattle that twin disc units are known for. At only 8 3/4" in diameter, we have also kept down the rotating mass to further improve performance. The kit not only includes the pressure plate and both discs, but also a state of the art high quality performance flywheel.

H3R PERFORMANCE EXPANDS ROLL BAR MOUNT OFFERING FOR OFF ROAD MARKET

H3R Performance announced the expansion of its line of stylish solid aluminum billet mounting accessories that enable consumers to mount a fire extinguisher to flat surfaces or to roll bars. Brushed and polished finish roll bar mounts are now available for 2" and 2-1/4" diameter roll bars, in addition to the 1-5/8" and 1-3/4" sizes and flat surface mounts previously introduced. To mount a fire extinguisher, the roll bar mounts pair with band clamps designed to fit 2.6" and 3.0" diameter fire extinguisher cylinders. A pull pin is used to quickly release the extinguisher from the mount.
